

Amendment

In The Claims:

Please amend claims 1, 5, 12, 20-23 (cancelled), 24, 25, 26, 29 and 30 (cancelled), 36, 40 and 41 as shown in the complete list of claims below.

1. (Amended) A plurality of mounts releasably adhered to a single sheet of a backing material, each mount consisting of a single layer of plastic such as PVC (being made of a single material) and being a mount for mounting paper to glass, and comprising a body having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive.
2. (Original) A plurality of mounts according to claim 1, provided in the form of a roll.
3. (Original) A plurality of mounts according to claim 1, provided in the form of a flat sheet.
4. (Original) A plurality of mounts according to claim 1, wherein the first and second surfaces of each mount are mutually opposite.
5. (Amended) A plurality of mounts according to claim 1, wherein the first surface of each mount adheres (is capable of adhering) the mount to only (only to) a part of one surface of the sheet of paper to form the mountable arrangement.
6. (Original) A plurality of mounts according to claim 1, wherein each mount is capable of releasably securing the mountable arrangement directly to glass.
7. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is flat.
8. (Original) A plurality of mounts according to claim 1, wherein each mount is flexible.
9. (Original) A plurality of mounts according to claim 1, wherein each mount is transparent.
10. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a plastics material.
11. (Original) A plurality of mounts according to claim 10, wherein each mount further comprises a plasticizer.
12. (Amended) A plurality of mounts according to claim 11, wherein each mount comprises approximately (at least) 55 parts plasticizer per 100 parts plastics material.
13. (Original) A plurality of mounts according to claim 10, wherein the plastics material is polyvinyl chloride.
14. (Original) A plurality of mounts according to claim 1, wherein the thickness of each

mount is up to 2 mm.

15. (Original) A plurality of mounts according to claim 14, wherein the second surface area of each mount is in the range 100mm² to 900mm².

16. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is square, rectangular, triangular or circular.

17. (Original) A plurality of mounts according to claim 1, wherein the second surface of each mount is not capable of adhering the mount to paper.

18. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a pigment material.

19. (original) A plurality of mounts according TO claim 1, wherein the backing material includes silicone.

20. (Cancelled) A device for dispensing a mount including a plurality of mounts as defined in claim 1.

21. (Cancelled) A method for making a plurality of mounts as defined in claim 1 comprising the steps of:

(i) providing the backing material (ii) applying an adhesive coating to a surface of the backing material (iii) adhering releasably the mount material to the backing material; and

(iv) forming the plurality of mounts from the mount material.

22. (Cancelled) A method according to claim 21, wherein the plurality of mounts is formed in step (iv) by cutting.

23. (Cancelled) A method according to claim 21, wherein the adhesive is applied in step (ii) by a roller or a spray nozzle.

24. (Amended) A mount for mounting paper to glass, consisting of a single layer of plastic such as PVC (comprising a body made of a single material), and having a first surface carrying an adhesive coating which adheres the mount to only (capable of adhering the mount only to) a part of one surface of a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.

25. (Amended) A mount for mounting paper to glass, consisting of a single layer of plastic such as PVC (comprising a body made of a single material) and having a first surface carrying an adhesive coating capable of releasably adhering the mount to a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.

26. (Amended) A mount according to claim 25, wherein the first surface carrying an adhesive coating, adheres the mount to only (is capable of adhering the mount only

to) a part of one surface of a sheet of paper to form a mountable arrangement.

27. (Original) A mount according to claim 25, wherein the first or second surface of the mount is flat.

28. (Original) A mount according to claim 25, wherein the mount is flexible.

29. (Cancelled) A mount according to claim 25, wherein the mount comprises a plastics material.

30. (Cancelled) A mount according to claim 29, wherein the mount further comprises a plasticizer.

31. (Original) A mount according to claim 25, wherein the thickness of the mount is up to 2mm.

32. (Original) A mount according to claim 31, wherein the second surface area of the mount is in the range 100mm² to 900mm².

33. (Original) A mount according to claim 25, wherein the second surface of the mount is not capable of adhering the mount to paper

34. (Original) A mount according to claim 25, wherein the first surface of the mount is adhered releasably to a backing material.

35. (Original) A mount according to claim 25, wherein the entire surface of the mount is adhered to less than half of the area of a surface of a sheet of paper for permitting the sheet of paper to be mounted to glass.

36. (Amended) A method for securing a first material to a second material, comprising:

- releasably adhering a first surface of a mount to the first material with an adhesive coating carried by the first surface, wherein the mount and first material form a mountable arrangement; and

- securing a second surface of the mount to the second material without adhesive, where the first and second surfaces are mutually opposite and the mount consists of a single layer of plastic such as PVC (comprises a body made of a single material).

37. (Previously Presented) The method according to claim 36, wherein the first material is a paper-based material.

38. (Previously Presented) The method according to claim 36, wherein the second material is a glass-based material.

39. (Previously Presented) The method according to claim 36, wherein the second material has a smooth surface.

40. (Amended) A method for securing a first material to a second material, comprising:

- adhering a first surface of a mount to a part of one surface of a sheet of paper with an adhesive coating carried by the first surface, wherein the mount and the sheet of paper form a mountable arrangement; and

- securing a second surface of the mount to glass without adhesive, where the first and second surfaces are mutually opposite and each mount consists of a single layer of plastic such as PVC (the mount comprises a body made of a single material).

41. (Amended) A mount arrangement for mounting paper to glass comprising: a plurality of mounts, each mount consisting of a single layer of plastic such as PVC (consisting of a single layer of soft plastic such as PVC) and having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
